IN THE CLAIMS

1. (Currently amended) A method of generating an out of zone alert when a sampled biomedical value does not satisfy a condition, wherein the generation of the out of zone alert is performed by an indicator, and the sampled biomedical value is determined in a heartrate monitoring system,

the method comprising the steps of:

~~and further wherein the indicator does not generate~~ not generating the out of zone alert when the sampled biomedical value fails to satisfy the condition until a sampled biomedical value is determined to satisfy the condition; ~~the method comprising the steps of:~~

determining when the a sampled biomedical value first satisfies the condition; and thereafter, permitting the generation of the out of zone alert when the sampled biomedical value is determined not to satisfy the condition.

2. (Currently amended) A method of generating an out of zone alert when a sampled heartrate value is below a threshold minimum value, wherein the generation of the out of zone alert is performed by an indicator, and the sampled heartrate value is determined in a heartrate monitoring system,

the method comprising the steps of:

~~and further wherein the indicator does not generate~~ not generating the out of zone alert when the sampled heartrate value is below the threshold minimum value until the threshold minimum value has been reached; ~~the method comprising the steps of:~~

determining when the a sampled heartrate value is at or above the a threshold minimum value; and

permitting the generation of the out of zone alert when the sampled heartrate value falls below the threshold minimum value.

3. (Original) The method as claimed in claim 2, including the step of enabling the indicator so that the indicator will generate the out of zone alert when the sampled heartrate falls below the threshold minimum value.
4. (Canceled)
5. (Currently Amended) The method as claimed in claim [[4]] 2, including the steps of:
determining a next sampled heartrate value and determining that it is less than the threshold minimum value; and
generating the out of zone alert.
6. (Original) The method as claimed in claim 5, wherein the generation of the out of zone alert is performed audibly and/or visually.
7. (Original) The method as claimed in claim 2, including the step of inputting the threshold minimum value into the heartrate monitoring system.
8. (Currently amended) A method of generating an out of zone alert when a sampled heartrate value is above a threshold maximum value, wherein the generation of the out of zone alert is performed by an indicator, and the sampled heartrate value is determined in a heartrate monitoring system,
the method comprising the steps of:
~~and further wherein the indicator does not generate~~ not generating the out of zone alert when the sampled heartrate value is below the threshold minimum value until the threshold minimum value has been reached; ~~the method comprising the steps of:~~
determining when the sampled heartrate value is above the threshold maximum
~~minimum value is greater than a sampled heartrate value;~~ and
permitting the generation of the out of zone alert when a subsequent sampled heartrate value is above the threshold maximum value.

Serial No. 10/627,093
Docket No. AO694

Examiner: J. Alexander
Art Unit: 3762

9. (Original) The method as claimed in claim 8, including the step of enabling the indicator so that the indicator will generate the out of zone alert when a sampled heartrate value exceeds the threshold maximum value.
10. (Original) The method as claimed in claim 8, including the steps of:
repeatedly sampling heartrate values until the maximum threshold value exceeds a sampled heartrate value; and
maintaining the inability to generate out of zone alerts until the maximum threshold value exceeds a sampled heartrate value.
11. (Original) The method as claimed in claim 8, including the steps of:
determining a next sampled heartrate value and determining that it is greater than the threshold maximum value; and
generating the out of zone alert.
12. (Original) The method as claimed in claim 8, wherein the generation of the out of zone alert is performed audibly and/or visually.
13. (Original) The method as claimed in claim 8, including the step of inputting the threshold maximum value into the heartrate monitoring system.
14. (Currently amended) A method of generating an out of zone alert when a sampled heartrate value is outside a Target Zone, wherein the generation of the out of zone alert is performed by an indicator, and the sampled heartrate value is determined in a heartrate monitoring system,
the method comprising the steps of:
~~and further wherein the indicator does not generate~~ not generating the out of zone alert when the sampled heartrate value is below the threshold minimum value until the threshold minimum value has been reached; ~~the method comprising the steps of:~~

(W1388528)

Serial No. 10/627,093
Docket No. AO694

Examiner: J. Alexander
Art Unit: 3762

determining when a sampled heartrate is first within the Target Zone; and
thereafter permitting the generation of the out of zone alert when the sampled
heartrate is determined to be outside the Target Zone.

15. (Currently amended) A method of generating an out of zone alert when a sampled
heartrate value does not satisfy a condition, wherein the generation of the out of zone
alert is performed by an indicator, and the sampled heartrate value is determined in a
heartrate monitoring system, the method comprising the steps of:

determining whether the sampled heartrate fails to satisfy a the condition
for more than a predetermined continuous period of time, and
if so:

suppressing further generation of the out of zone alert even if a
next successive sampled heartrate value fails to satisfy the condition, and
continually suppressing further generation of the out of zone alert for
successive sampled heartrate values that fail to satisfy the condition until a
sampled heartrate value satisfies the condition, and when the sampled
heartrate value does satisfy the condition, indicating that the sampled
heartrate value has satisfied the condition.

if not:

generating the out of zone alert.

Claims 16-17: (Canceled)

18. (Currently amended) The method as claimed in claim 15 17, including the step of
generating an out of zone indication if a successive sampled heartrate value fails to
satisfy the condition.

19. (Currently amended) The method as claimed in claim 15, wherein the condition
is that whether the sampled heartrate value is within ~~outside~~ a Target Zone.

20. (Currently amended) The method as claimed in claim 15, wherein the condition is that ~~whether~~ the sampled heartrate value is above a threshold minimum value.

21. (Currently amended) The method as claimed in claim 15, wherein the condition is that ~~whether~~ the sampled heartrate value is below a threshold maximum value.
